Create a Student class.
Add name, age and marks using *init*.
Create a method to display student information.
Create a method to calculate average marks.
Create a method to determine pass/fail.
Create a Teacher class.
Create a GraduateStudent class that inherits from Student.
Override one method in the child class.
Section B — Exception Handling
Handle invalid integer input.
Handle division by zero.
Handle invalid list index.
Handle missing dictionary key.
Create a function that raises an exception when age is below 18

Create a small Student Management System using:
Class
Objects
Methods
Lists
Dictionaries
Functions
Exception handling
File handling
